Data Security in Preparation for M365 Copilot

Jason Rahn | Security Cloud Solutions Architect | November 13, 2024

AGENDA

- Overview of Microsoft Purview
- Protecting your data with Information Protection
- Interactions with AI
- Information Protection SDK
- Introducing Data with Graph Connector

What does it take to be optimized for AI?

Ready for Microsoft 365 Copilot

Minimum Required: Enable Copilot for EAP users

M365 E3 or E5

- Microsoft 365 Apps for Enterprise (Current Channel)
- Azure AD account
- Microsoft OneDrive
- Microsoft Teams
- New Outlook
- Microsoft Loop

Full requirements available at: [Get started with Microsoft 365 Copilot - Microsoft 365 admin | Microsoft Learn](#)

Optimized for Microsoft 365 Copilot

Highly recommended: Data compliance, preventing over-sharing and potential internal data leakage

- Microsoft Information Protection
 - **Manual** Labelling Policies
- OneDrive and SharePoint Data & Controls

M365 E3

- Microsoft Information Protection
 - **Automatic** Labelling Policies
 - **Automatic** Retention/Deletion Policies
- Access Reviews

M365 E5

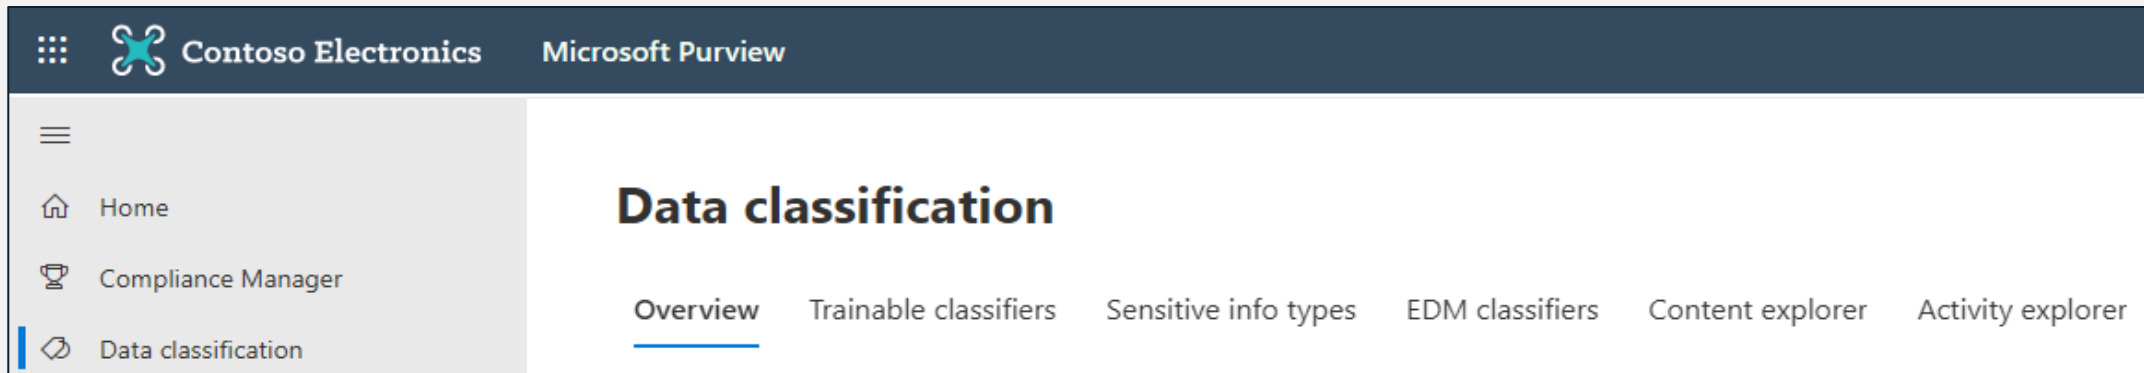

Customer
Responsibility

Data Classification Section

Data Classification Page is organised into Six Tabs

- Overview
- Trainable classifiers
- Sensitive info types
- EDM classifiers
- Content Explorer
- Activity Explorer

Best-in-class classification technologies

Sensitive Info Types

300+ out of the box info types like SSN, CCN

Clone, edit, or create your own

Supports regex, keywords, and dictionaries

AVAILABLE TODAY

Named Entities

50+ entities covering person name, medical terms, and drug names

Best used in combination with other sensitive info types

AVAILABLE TODAY

Exact Data Match

Provides a lookup to exactly match content with unique customer data

Supports 100m rows and multiple lookup fields

AVAILABLE TODAY

Trainable Classifiers

23 new pre-trained ready-to-use trainable classifiers

Create your own classifier based on business data

AVAILABLE IN PUBLIC PREVIEW

Credentials SITs

42 new SITs for digital authentication credential types

Use in auto-labeling and DLP policies to detect sensitive credentials in files

AVAILABLE TODAY

Context-based Classification

Service-side auto-labeling
ODSP default site label

- File extension
- Document name contains word
- Document property is
- Document size greater than
- Document created by

ROADMAP ITEM

Templates

- Provide pre-defined policies that use available classifiers
- Cover multiple industry and geographical regulatory requirements
- Easily customizable, can be edited to meet customer needs
- Get started easily with simulations, rerun as needed to fine tune

Categories	Templates	U.S. Gramm-Leach-Bliley Act (GLBA) Enhanced
Enhanced	U.S. Gramm-Leach-Bliley Act (GLBA) Enhanced	Helps detect the presence of information subject to Gramm-Leach-Bliley Act (GLBA), including information like social security numbers or credit card numbers. This enhanced template extends the original by also detecting people's full names, U.S./U.K. passport number, U.S. driver's license number and U.S. physical addresses. We have also enhanced this template with Trainable Classifier "Business-Finance" and "Business-Tax" which can detect financial information such as Budget proposal, Financial statements and Proposals and Reports and tax information such as Tax planning documents, Tax forms, Tax filing related documents and Tax regulation documents.
Financial	Australia Health Records Act (HRIP Act) Enhanced	
Medical and health	U.S. Health Insurance Act (HIPAA) Enhanced	
Privacy	Australia Privacy Act Enhanced	
Custom	General Data Protection Regulation (GDPR) Enhanced	
	Japan Personally Identifiable Information (PII) Data Enhanced	
	Japan Protection of Personal Information Enhanced	
	U.S. Patriot Act Enhanced	
	U.S. Personally Identifiable Information (PII) Data Enhanced	
	U.S. State Breach Notification Laws Enhanced	
		Protect this information: <ul style="list-style-type: none">• Business - Tax• Business - Finance• Credit Card Number• U.S. Bank Account Number• U.S. Individual Taxpayer Identification Number (ITIN)• U.S. Social Security Number (SSN)• U.S. / U.K. Passport Number• U.S. Driver's License Number• All Full Names• U.S. Physical Addresses

Building AI Solutions

Why Sensitivity Labels Matter?

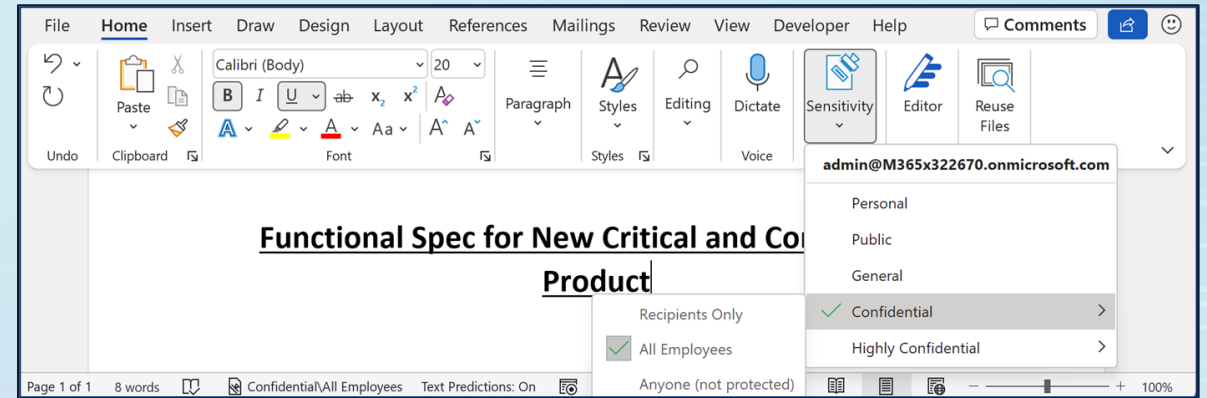

- End-users work with and store data across Office 365 that can be shared with others
- **Some** of this data is sensitive in nature and can present significant risk if stolen, inadvertently shared, or exposed through a breach
- Sensitivity labels can **classify** and **protect** this sensitive information regardless of where it exists, **even if it leaves your organization**
- You can apply sensitivity labels to:
 - **Files and emails** in Office apps using encryption and content markings
 - Content in **third-party apps and services** with Microsoft Cloud App Security and the Microsoft Information Protection SDK
 - **M365 Groups and SharePoint Sites** by with privacy, access, and external sharing controls
 - **Data in Power BI**, even when it's saved outside the service
 - **Assets in Azure**, including SQL columns and files in Azure Blob Storage

What is a Sensitivity Label?

A sensitivity label is a stamp that you apply to data to clearly state how sensitive it is and to enforce protection settings. Labels are:

- **Customizable and flexible:** map your data classification framework to labels to meet business/compliance requirements
- **Clear text:** label stored in content metadata, allowing third-parties to protect content
- **Persistent:** protection follows email/file regardless of its location

Components of a Sensitivity Label

Label scope

- Files & Emails
- Groups & Sites
- Azure Purview assets (preview)

Protection settings

- Encryption and content markings for files & emails
- Privacy, access control, and external sharing settings for groups & sites

Auto-labeling settings

- Auto-labeling settings (E5/G5) based on identification of trainable classifiers and/or sensitive information types

Labeling data at scale – Guiding principles

Apply labels by default using Label Policy

- When content is created or accessed, set a default label for
 - Files
 - Emails
 - Meetings
 - PBI Reports
 - Containers
 - ...

Apply labels based on context

- By location, for sensitive SPO libraries, site owners can set a default label per library
- For documents at rest
 - Use service-side auto labeling by file size, extension, properties ...
 - Use SetLabel Graph API to label specific files based on your criteria
- For emails in motion
 - Use service-side auto labeling to trigger labels based on predicates like sender, recipient, domain, ...

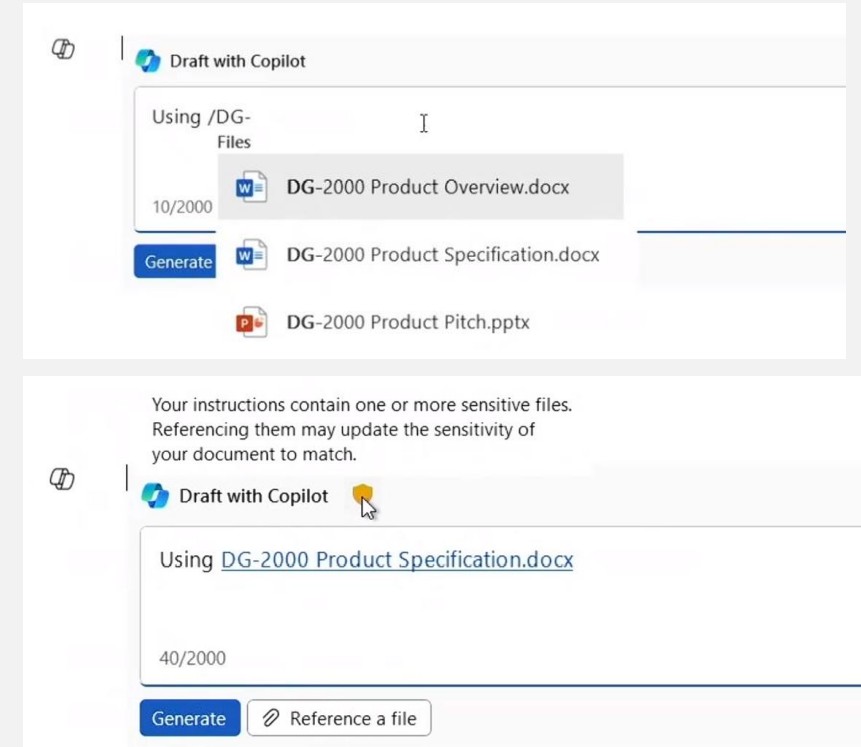

Apply labels automatically based on content

- Client-side auto-labeling for content when files are in-use and mails are being composed
- Service side auto-labeling policy for files at-rest in SPO, ODB and mails in-transit in Exchange

Content Created using Copilot

When using Copilot to generate new content based on an existing item with a sensitivity label, the sensitivity label from source file is seamlessly inherited, along with its protection settings. Example:

- User employs Copilot in Word, selecting "Draft," then references a file.
- Source content bears the sensitivity label "Confidential\Anyone (unrestricted)" with configured protection settings.
- Result: New content inherits the label "Confidential\Anyone (unrestricted)"

Copilot and Sensitivity Labels (Limitations)

Access Limitations with Encrypted Content:

- Copilot functionality may be restricted if encrypted content grants VIEW but not EXTRACT rights.

Label Inheritance Dynamics:

- Inherited sensitivity labels override lower-priority manually applied labels but not higher-priority ones.
- Automatic labeling scenarios follow a similar pattern.

Limitations with Encrypted and Double Key Encryption (DKE) Data:

- Copilot cannot access or return data protected by Double Key Encryption (DKE).
- Encryption configurations may impact Copilot's functionality, particularly with user-defined permissions.

Copilot and Sensitivity Labels (Limitations)

Transition from AIP Add-In:

- The Azure Information Protection (AIP) add-in is retiring in April 2024; Copilot doesn't support it.
- Users are encouraged to migrate to built-in labeling for Office apps for Copilot support.

Teams Sensitivity Labels Limitation:

- Copilot doesn't currently recognize sensitivity labels protecting Teams meetings and chats.

- Finish

Auto-labeling for files and emails

Since encryption is turned on, a large amount of content might be automatically encrypted when this label is applied. Turning on encryption impacts Office files (Word, PowerPoint, Excel) and PDF files that have this label applied. Because the files will be encrypted for security reasons, performance will be slow when the files are opened or saved, and some SharePoint and OneDrive features will be limited or unavailable. Project Obsidian

Updated Engine Chip Design

Automated Car Team
October 21, 2023

Contacts	Email	Timeline
Lidia Holloway	lidia@contosoelectronics.com	Q4 FY 24

With our new investments in automated cars we need to redesign the AI500 chip to pull more throughput and reduce overheating.

We have attached more fans to the base chip but need more focus on the transistors across the entire board.

Copilot

 **SENSITIVITY** Due to content created by Copilot, your organization automatically applied the sensitivity label: Confidential\Anyone (unrestricted)

display.

- The keyboard is foldable and detachable, allowing you to use it as a stand-alone accessory or as part of the device.
- The processor is faster and more efficient, enabling you to run multiple applications and programs smoothly.
- The packaging is more eco-friendly and minimalist, using recycled cardboard and less plastic.
- The design is more modern and elegant, with clean lines and a single brand color.

How can I get DG-2000?

DG-2000 will be available in both physical and virtual storefronts, starting from April 5. You can pre-order it online from our website or from our authorized retailers. You can also visit our stores or our partner outlets to see and try the product in person. We offer free shipping and a 30-day money-back guarantee for online orders.

Where can I find more information about DG-2000?

You can visit our website, our social media pages, or our blog to learn more about DG-2000 and its features. You can also watch our video tutorials, read our user reviews, or contact our customer service team for any questions or concerns. We are always happy to hear from you and to help you get the most out of your DG-2000.

Considerations for Graph Connectors

Application sets the
ACL

Unique IDs are
controlled by the
application

Your application
must make all
updates to the data

Add User activities
to your items

Set your vertical to
show results inline

Apply Semantic Labels

title	The title of the item that you want shown in search and other experiences.
url	The target URL of the item in the data source.
createdBy	The name of the person who created the item in the data source.
lastModifiedBy	The name of the person who most recently edited the item in the data source.
authors	The names of all the people who participated/collaborated on the item in the data source.
createdDateTime	The date and time that the item was created in the data source.
lastModifiedDateTime	The date and time that the item was last modified in the data source.
fileName	In case of a file, the name of the file in the data source.
fileExtension	In case of a file, the extension of the file in the data source.
iconUrl	The URL of an icon.
containerName	The name of the container.
containerUrl	The URL of the container.
